

# Making your medications more effective through genetic testing

## What is Pillcheck™?

Everybody responds to medications differently. Pillcheck is an easy DNA testing service that uncovers how effectively medications work with your body based on your unique genetic makeup. It helps to limit ineffective treatment and adverse side effects, so you feel better sooner.

99% of people have genetic variations that determine how they'll respond to drugs.

Pillcheck can help guide prescribing medications for depression, anxiety, chronic pain, as well as for heart and digestive conditions, arthritis, and more. For more information, go to [pillcheck.ca](http://pillcheck.ca).

## Standard Dose

## Pillcheck and your privacy

Get a personalized report on a secure online portal with a summary of your results to share with your physician. The test focuses only on how you respond to medications and does not assess any medical conditions. Your results do not impact insurance coverage decisions, and Pillcheck destroys your sample after your report is complete.

### Here's what people say about Pillcheck:

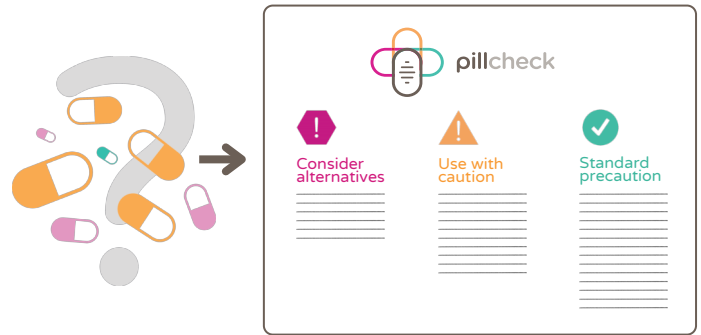

It has changed the way my illness is treated and has helped me immensely!

## Find the right medication and feel better sooner

Share your personalized Pillcheck report with healthcare practitioners for insight into which medications work best for you and at what dosage. Pillcheck is based on the latest scientific knowledge available. We will update your report and notify you via email about new medications as they are added.

78% of prescriptions were changed based on Pillcheck results.

Innovative Canadian Pharmacogenomic Screening Initiative.  
Journal of the American Pharmacists Association 2017;57:624-629.

## Feel confident about your prescriptions

Pillcheck includes a personalized report complemented by a Pharmacist's Opinion Letter to help your doctor make prescription recommendations for you. Many Pillcheck customers switch to more effective medications, change the dosage of their current medications, or stop taking certain medications altogether.

## Good for today, good for tomorrow

Pillcheck is a simple cheek swab that takes 3 minutes at home and unlocks a lifetime of value! You don't need to be on any medications to benefit from Pillcheck. Since your DNA stays the same, your Pillcheck report can answer your medication questions for the future.
